Selected New SUPER

For the last five years we have been importing and selecting the best new varieties of English Chrysanthemums. They have created quite a stir with us, as well as with hundreds of visitors who have seen them in bloom. Their colors, the size of the blooms and their free-flowering habit were unequaled by any other English Mums we had ever seen. Practically all of them have very large flowers from 4 to 6 inches across. They can either be grown to give a mass of blooms or can be disbudded for even larger blooms and grown for exhibition purposes. Our supply of

SWEETHEART GROUP

This is really a class by itself, with lovely colors and blends. These varieties usually start to bloom in September and continue until frost. If an upright plant is wanted, they must be staked; otherwise, they will make a sprawly plant about 18 inches high. These could be called Cascade Mums and could very effectively be used on the top of a wall or on slopes or banks. The flowers are all double and of medium size—3 to 4 inches across.

ALEX CUMMING. Mammoth, colorful, vigorous—1952's Wonder Mum! Superbly molded, 4-inch flowers open entrancingly rich, pure cerise and gently mature to delightful rose color. Majestic blooms incurve at the center and recurve at the petal tips. Exotic as a big greenhouse Mum. A 2½-foot eye-ful from early October on.

FASCINATION. A huge, lovely decorative 4 inches across or more, of stunning silvery lavender-pink with centers a wee bit deeper. As further charm, it offers an occasional bloom of misty, creamy white. A paragon of beauty from late September on, when deep rosy red buds swell so enticingly. Often only one gigantic flower to a stem. Prolific, 2-foot plant.

Carroll Gardens

FINEST HARDY MUMS

Hardy Chrysanthemums are among the most dependable flowers in the autumn garden, providing glorious color and spicy fragrance from early September (August with some varieties) until heavy frost.

There are Chrysanthemums of many types, from the Cushion Mums for low mounds of color in borders and rock gardens, to the long-stemmed kinds for cutting.

We feel that we have one of America's finest and most up-to-date Chrysanthemum collections. Our list includes selected varieties from the University of Minnesota, University of Chicago, and Bristol collections, and from several other sources in different parts of the country, including some of our own introductions and the new imported Super Giant English varieties.

Due to lack of space, we are listing only the most important varieties that we have. Many other sorts are available. Write us if you are interested in them.

CULTURE. Chrysanthemums will grow in any good average garden soil which has been enriched with manure or good commercial fertilizer. Plant them 15 to 18 inches apart. Cultivate the soil between them, particularly while they are in the young stage. You can pinch the plants up to July 15 if they are tall and spindly. Don't pinch any more after that date. Hardy Chrysanthemums do best if grown in full sun. If they are planted in the shade, they will grow too tall, have weak stems, and produce inferior blooms.

PLEASE NOTE: Postal and express rates have been increasing for the past few years, and only last October 1, 1953, postal rates went up 25% more. This makes it impossible for us to absorb all the transportation cost as we have in the past and still maintain the same prices and our usual high standard of products. Instead of raising prices, we decided to ask our customers to send a few cents extra with the order, and help to absorb part of the transportation cost.

HOW MUCH TO SEND: On all orders less than and up to \$5.00 add 50c for postage. All orders over \$5.00, send 50c plus 5c for each additional dollar over \$5.00.

For example, if your order came to \$9.00, you would send 50c for the first \$5.00, and 5c for each of the additional \$4.00, making a total of 70c.

PLAN FOR A PERENNIAL BORDER

A simplified plan to fit your space, your location and your pocketbook. An exclusive and original idea of Carroll Gardens to help you have a beautiful perennial border at reasonable cost and with minimum care. Read it carefully and decide on the group that fits your purpose best.

If you are planning a formal garden, a straight-line border fits best into your scheme. But if you are trying for an informal effect, a curved border will be better. A perennial border is always best planted along a dividing line, along a picket fence or in front of shrubbery. It is never advisable to put it in the middle of the lawn. The length as well as the width depends on the space that you have available.

THE PERENNIAL BOOKLET OFFERED FREE ON OUR ORDER SHEET WILL GO INTO MORE DETAIL REGARDING THE PLANTING OF A PERENNIAL BORDER. YOU WILL FIND IT HELPFUL.

If this plan doesn't suit you, why not lay one out for yourself? You'll have lots of fun doing it.

A Keyed Plan for your convenience. A Perennial Border showing the effective use of Summer Phlox. See page 11 for varieties.

PLEASE READ CAREFULLY. Here is how the plan works: If you want to use only 24 plants, these will be enough for a bed 8 feet long and 3 feet wide, using one plant for each space provided as keyed. If you want to make the bed 16 feet long and 3 feet wide, use 48 plants, or 2 for each space. If you want to make the bed 24 feet long and 3 feet wide, use 72 plants, or 3 for each space. However, if you have the space and want a really spectacular and colorful border, make the bed 30 feet long and 5 feet wide. Put 6 plants in each space as keyed, and set them about 12 inches apart.

The red mark indicates where groups of spring-flowering bulbs such as tulips, daffodils, hyacinths, crocus, etc., may be planted to brighten the border in very early spring. Peonies, iris and Oriental poppies may be planted where the letters appear.

CLEMATIS, Duchess of Edinburgh

WISTERIA

Showy, Large-Flowering Clematis

A partially shaded location suits Clematis best. If it is grown in the sun, a few small plants to shade the lower stems and roots will help to keep the ground cool and moist. A summer mulch of peat moss or spent hops may be used to advantage. Clematis thrives best in well-drained, rich garden loam of rather light texture. Sand and peat moss may be mixed with heavy soil to loosen it, and a little lime should also be added. Set the collar of the plant at least 2 to 3 inches below the surface of the soil. Firm the soil well around the roots, and water thoroughly.

CARROLL GARDENS, Westminster, Md.

Gentlemen:

Felt that it was important to tell you how pleased I was in receiving my order of shrubs and flowers from you. Such healthy plants, and packed so beautifully. I've ordered from many nurseries, but never have I received such lovely plants, so from now on Carroll Gardens will be my favorite nursery.—MRS. GEO. E. ISAAC, 204 Elmhurst Ave., Norfolk 13, Va.

CARROLL GARDENS, Westminster, Md.

Gentlemen:

Your order No. 14121 came through perfectly; as usual, the quality of your roses as well as your packing were tops. Both this year and last I split my rose purchase between two or three well-known firms and both years have found your stock and packing consistently better.

Obviously such stock is an advantage to my own reputation for "not the cheapest, but the best." I do not expect to split my order in the future.—ARNOLD RADDER NURSERIES, Stillwell's Corner, R. D. 3, Freehold, N. J.

CLETHRA

The Rose-Pink Pepperbush

CLETHRA (Sweet Pepperbush)

Alnifolia rosea. The Pepperbush is a compact, neat plant with many slender, upright branches, rarely over 4 to 5 feet high. Each branch is topped with finger-like clusters of small, deliciously scented pink flowers. To many people, the fragrance is reminiscent of pepper, hence its name. This is a very fine and useful shrub, especially for low moist places or damp woodland conditions. It grows equally well in full sun or shade. Here is the rare pink form of the much loved white Pepperbush, giving bloom when most needed in late summer and early autumn, with fine dark green foliage to boot. \$2.00 each; 3 for \$5.00; 6 for \$9.50.

HYPERICUM, Hidcote Variety

New Shrubs

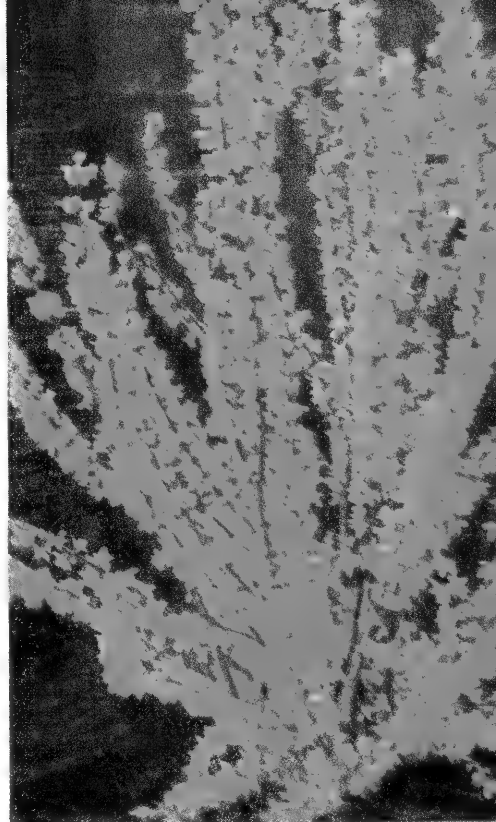

Easy to Grow

Average Soil • Sunny Location

FORSYTHIA

Lynwood Gold. Without question, the finest new Forsythia. The upright branches are literally smothered under golden yellow flowers. Individual blooms are better and fuller in form as well as of greater substance. For a magnificent show of golden yellow, there is nothing better. Superb for cutting and flowering in the house during the winter. Ultimate height 5 to 7 feet. A worthwhile companion for the already popular Spring Glory. 2 to 3-ft. plants, \$2.25 each; 3 for \$6.00.

Spring Glory. A lovely pale yellow variety, a sight not easily forgotten. Large, pale yellow flowers cover the branches in such masses that they literally bend with the weight. The individual flowers are larger and much more beautiful than any of the common Forsythias. The erect bush attains a height of 6 to 10 feet. 2 to 3-ft. plants, \$1.50 each; 3 for \$4.00.

FORSYTHIA, Lynwood Gold

CRAPE-MYRTLE, William Toovey

Will reach a height of 15 feet at maturity. Nice plants, 18 to 24 in. high, \$1.50 each; 2 for \$2.75; 3 or more at \$1.25 each.

HYPERICUM (St. John's Wort)

Hidcote Variety (Dwarf Moserianum). A much improved Moserianum, which originated on the Hidcote estate in England. The flowers are waxy golden yellow, cup-shaped and produced more freely than on Moserianum. Here also it has proved to be hardier and a stronger, more prostrate grower. Grows 18 to 24 inches high. \$2.00 each; 3 for \$5.00.

HYBRID MALLOW

(Annie J. Hemming)

Shrubs**

MAIDEN BLUSH

CAMELLIA Sasanqua

One of the newer and finest of all the broad-leaved evergreens. Similar to the ever-popular *Camellia japonica* of the South, but looser and faster growing. Plants bloom profusely from the latter part of September through November. Sasanquas can be grown without protection from the vicinity of Baltimore southward and in other warm sections. They are easily grown in soils and locations suitable for azaleas.

AZALEA MOLLIS HYBRIDS

The color range is through innumerable shades of orange, flame, yellow and salmon-orange of the most brilliant hues. Unlike all other Azaleas, it is quite tolerant of lime and does well most anywhere. It is very hardy; ten degrees below zero does not affect the flower buds. A group of these in bloom in the foreground of the shrub border is a delightful sight. Average height of old plants about 3 to 5 feet. Mixed shades only.

Bushy, 8 to 12-in. plants, some with flowering buds, \$1.50 each; 3 for \$4.00; 6 for \$7.00. Bushy, 12 to 15-in. plants, covered with flower buds, \$2.50 each; 3 for \$7.00; 6 for \$12.50.

Brilliance. Single flower with 7 or 8 petals of light rose-pink. Very compact, upright grower with dark, shiny green foliage.

for Acid Soil

Blueberries

FOR ORNAMENT AND FRUIT

Cultivated Blueberries are hardy shrubs of rare beauty. They need acid soil and full sun or very little shade. They are doubly valuable because they are fruitful and ornamental throughout the entire year.

- **Cabot.** Very early. A broad, low bush 3 feet tall. New growth in winter is light red over olive. Large berries with a delicious subacid flavor.
- **Concord.** Over 6 feet tall. The young growth is bright red in winter. Large berries, a few days earlier than Rubel. Very fine flavor.
- **Jersey.** Very large, vigorous bush. The winter color of the young growth is light red over golden brown. The light blue berries are among the very largest and ripen with Rubel.
- **June.** A little earlier than Cabot. Berry is large, medium blue, sweet and delicious when fully ripe. Newer and probably better than Cabot.
- **Pioneer.** About a week later than Cabot. The bushes are stocky, seldom exceeding 4 feet in height, broad rather than high. Stems are stout and stiff, and the winter color of the new growth is a delightful red. Heavy crops of berries close set in the cluster, larger than Rubel, of medium blue color and fine flavor.
- **Rancocas.** Slender, vigorous, upright, habit, rarely over 5 feet tall. The winter twigs are dark red. Berries are larger than those of Rubel and begin to ripen several days earlier.
- **Rubel.** A vigorous, productive variety. Bushes stand 6 feet high, and the winter color of the young wood is rich red. The large berries are usually ready the first week in July.

For best results, plant not less than 3 plants of 3 different kinds

Strong, 3-year-old plants,
3 for \$4.50; 6 for \$8.00; 12 for \$15.00

MAGNOLIA →

grandiflora

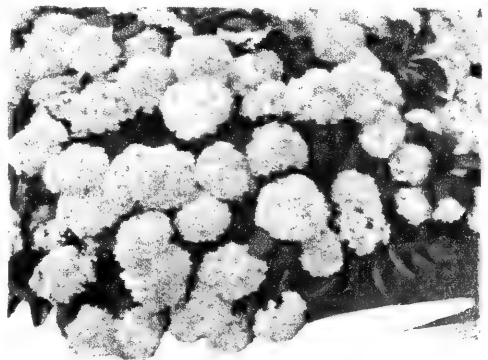

The handsome evergreen Magnolia of the South. A beautiful pyramidal tree attaining a height of 40 feet or more. The very large, thick, evergreen leaves are lustrous above and rusty beneath. The cupped, white flowers are 6 to 8 inches across and have a lemon odor. The Southern Magnolia prefers being on high rather than low ground; it must be moist but well drained. Hardy in Maryland and southward. Nice healthy plants, 12 to 15 in., \$2.00 each; 2 for \$3.50; 3 for \$5.00.

PIERIS japonica

PIERIS japonica

Japanese Andromeda; Lily-of-the-Valley Shrub. One of the loveliest shrubs in our collection, for there is not a season in the year when it does not attract attention. The graceful sprays of flower buds are formed in late summer, and later the foliage assumes glorious red and bronzy tints. In early spring the buds open into creamy white flowers resembling lilies-of-the-valley. This shrub will develop into a lovely specimen if planted in half shade or full sun. It grows to about 5 feet. Nice young plants, 12 to 15 in., \$1.25 each; 3 for \$3.25; 6 for \$6.00.

HYDRANGEA, Nikko Blue

A beautiful new hardy Hydrangea. It blooms on the new wood; therefore, you are sure of getting a good crop of blooms every year. It will make a nice compact bush about 3 to 4 feet high and give you a wealth of bloom during the summer. In acid soil the flowers are blue; in neutral or alkaline soil they turn pink. To make the soil acid, water every two or three weeks with aluminum sulphate (2 tablespoonfuls to the gallon). Give winter protection in the North. Plant in partial shade or full sun. Strong, 2-yr., field-grown plants, \$2.25 each; 2 for \$4.25; 6 for \$11.50.

← New HYBRID RHODODENDRON

The aristocrats of broad-leaf evergreen shrubs. Perhaps no other flowering bush makes such a spectacular show or creates more interest than these new hybrid Rhododendrons. Ideal for foundation planting on the east or north side of the house, or for specimen or group plantings, in any partially shaded location in the garden. They require acid soil, and it is always best to mix a liberal amount of peat moss or rotted oak leaves into the soil at the time of planting, and to add a mulch of either leaves or peat moss—a little each year, preferably in the fall. This will furnish the proper soil condition that they need. At maturity, these handsome shrubs will attain a height of 4 to 6 feet. Plants offered are grown from seed of the finest new reds. No doubt, of course, that these varieties will show some variations in color; therefore, the plants offered are not guaranteed as to color, but we can assure you that whatever color you get, it will be fascinating and most beautiful. 3-yr.-old, transplanted plants, 10 to 12 in. high, \$2.00 each; 2 for \$3.50; 4 for \$6.00; 12 for \$15.00.

Young Evergreens for You to Grow On

In a matter of three to five years, these young evergreens will develop into nice specimen plants worth \$3.00 to \$6.00 each. These are easy to grow and can be planted directly where you want them; or they can be planted in a corner of your garden about 15 to 18 inches apart and transplanted later to their permanent location, when you are ready for them.

You certainly can save yourself lots of money if you don't mind waiting three to five years till they grow into nice size. If you had to buy them of that size, they would cost \$3.00 to \$6.00 each.

If you are planning on an evergreen yew hedge, these young plants we offer are excellent for that purpose, and at a great saving.

EVERBLOOMING CLIMBING ROSES

These beautiful everblooming climbers are very satisfactory for warmer sections of the country, but we do not recommend them for colder localities unless you are willing to experiment with them and see what they will do for you. They are certainly worth some extra care in the way of winter protection. These are identical with the bush forms and bloom continuously all summer and fall. If you live in the Southern States or in the warm Western States, you should certainly try some of them.

Floribunda Roses

A Mass of Color from June to Fall

These are bush Roses producing clusters of bloom without interruption from early summer until late frosts. They are all very easy to grow and exceptionally hardy. Besides using them informally in beds, plant Floribundas in the foreground of shrubs and as hedges.

Plant Floribundas 15 to 18 inches apart and prune lightly to the desired height, removing old flower clusters and thinning out dead wood. They grow 2 to 3½ feet tall.

BRIGHT EYES. Plant Pat. 880. Lovely canary-yellow changing to silvery yellow. Very strong grower. \$1.50 each; 3 for \$3.95.

CRIMSON ROSETTE. Plant Pat. 901. Extremely double flowers with 50 or more petals forming a perfect rosette when the bloom is fully open. Deep red, borne in sprays. \$1.75 each; 3 for \$4.75.

FASHION. Plant Pat. 789. Warm Oriental-red buds becoming sparkling coral-pink suffused with gold. Delicately fragrant. Blooms from June to frost. \$2.00 each; 3 for \$5.35.

FLORADORA. Dazzling cinnabar-red. Buds are exquisitely formed, produced in profusion on a neat, symmetrical, 1½-foot bush. \$1.50 each; 3 for \$3.95.

GOLDILOCKS. Plant Pat. 672. Rich golden yellow, very double blooms 3 inches across. Spreading, bushy; dark foliage. \$1.50 each; 3 for \$3.95.

LILIBET. Plant Pat. 1209. Delicate, almost fragile-looking light rose, melting into dawn-pink during its progressive stages of bloom. These clusters

of small Roses, well formed, covering a bush with beautifully clothed dense foliage, make it most desirable for either single plantings or for hedge, border and foundation in mass arrangement. Its continuous blooming period, daintiness of color, and resistance to mildew and blackspot are a few of its queenly qualities. \$2.50 each; 3 for \$6.60.

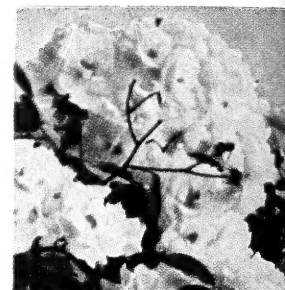

MA PERKINS. Plant Pat. 1143 One of the newer Floribundas. The color is sparkling salmon-shell-pink. Ovoid buds and good-sized, well-formed flowers with pleasing fragrance. Glossy green foliage on a bushy plant 2½ feet tall. \$2.25 each; 3 for \$6.00.

MICKY. This delightful Rose was created for those who admire boutonniere, corsage-type. Roses; also ideal for floral arrangements. Buds cerise, later changing to deep coral; semi-double, urn shape. Plants are compact, very vigorous, attaining a height of 4 feet and a width of 4½ feet. \$1.50 each; 3 for \$3.95.

Carrousel

Plant Pat. 1066. Crimson buds in large clusters open to high-centered, fragrant blooms of vivid, velvety red, fairly glowing in the sun. Each flower is about 3 inches across, bearing 25 to 35 petals. Does not burn or blue in intense heat and will withstand extreme cold. Vigorous and fast growing, making a bushy, well-shaped plant. Blooms freely and lasts remarkably well when cut. Try it as a specimen plant, for background planting, or as a hedge. \$2.00 each; 3 for \$5.25; 12 for \$20.00; 25 or more, \$1.60 each.

Carrousel in tree form, regular sizes, about 5-ft. trees, \$6.00 each; 2 for \$11.00.
